

# How do Industrials and Utilities Sector differ in terms of cost of goods sold in Year 4?

As it can be observed from the histograms, both Industrial and Utilities Sectors, in Year 4, have high concentration in the left and are right-skewed/positively skewed. It means that the mean is greater than the median for each sector.

When compared, the Industrial Sector has double the range than the Utilities Sector (\$80,790,000,000 to \$41,494,900,000), also the standard deviation (11984123609 to 9144145971), that means that the COGS for Industrial Sector is higher than the Utilities Sector with more than twice the expenses (\$1,150,316,068,000 to \$402,027,816,000).
